Commission on Poverty

Indicators of Poverty - An update for 2006 -

Background

The Commission on Poverty (CoP) agreed in its earlier meetings to have a set of multi-dimensional indicators for monitoring the poverty situation in Hong Kong at a macro level, and to update these indicators regularly. Moreover, these macro poverty indicators are meant to give a broad indication of how the poverty situation evolves over time and to highlight areas for more focused study. They provide additional reference information for bureaux and departments to formulate and evaluate policies to assist the needy. An earlier update of these indicators for the year 2005 was released in CoP Paper 14/2006 and discussed at the CoP meeting on 27 September 2006.

Purpose

2. This paper provides an update of the poverty indicators for the year 2006. The set of poverty indicators is listed at Annex I. Detailed analysis of their performance is given at Annex II, with the relevant data listed at the Statistical Appendix. Members are invited to note the poverty indicators for 2006 and the highlights of analysis given below.

Highlights of analysis

3. There was a continued and almost across-the-board improvement in the poverty indicators in 2006, in tandem with the sustained strong economic upturn. Among the 18 life-cycle-based poverty indicators, most of them exhibited improvements. This was attributable on one hand to the spectacular overall economic performance last year, and on the other hand to the concerted efforts of the Government and other community groups in the provision of social services. As to the six district-based indicators, all the districts attained improvements one way or the other in 2006. The improvement was most distinct for Kwun Tong among the

¹ The time series of some poverty indicators enumerated from the General Household Survey has been revised to take into account enhancements in the estimation method and the results of the 2006 Population By-census, which provide a benchmark for revising the population and related figures compiled since the 2001 Population Census.

less well-off districts.²

- 4. The 10 indicators under the following 8 groups exhibited an improved performance in 2006:
 - □ Unemployed persons (Indicator 11)
 - Persons unemployed for six months or longer, and 12 months or longer (Indicator 12)
 - □ Persons living in households with income below average Comprehensive Social Security Assistance (CSSA) payment (Indicators 2 and 10)
 - Persons living in workless households (Indicators 1 and 9)
 - □ School attendance rate of youth aged 16-19 (Indicator 5)
 - Persons aged 20-24 with tertiary education (Indicator 6)
 - □ Elderly patients under the medical fee waiver mechanism of public hospitals and clinics (Indicator 17)
 - □ Children aged 0-5 and 6-14 with single parent and in households with income below average CSSA payment (Indicator 3)
- 5. On the other hand, different performance was seen for the 8 indicators under the following 4 groups:
 - Employed persons working 35 hours or above per week and with monthly employment earnings less than 50% of the median (Indicator 13)
 - An across-the-board increase in the number and share was seen among various age groups for employed persons aged 15-59, with the overall figures going up from 155 800 and 5.9% in 2005 to 213 600 and 8.0% in 2006 respectively. This was due in part to the increased availability of full-time low-skilled jobs for previously underemployed workers, especially those in the elementary occupations group, alongside the sustained economic recovery.
 - Persons aged 0-14 and 60 or above living in private temporary housing and private shared units (Indicators 8 and 18)
 - Both the numbers and shares of children in the 0-5 and 6-14 age groups with poor living conditions decreased in 2006. However, those in respect of the older age groups of 60 or above, and 65 or above increased over the

-

² Less well-off districts refer to districts whose median monthly household income (Indicator 22) and median monthly employment earnings (Indicator 23) together are lower than their respective overall average figures in 2006. They include Sham Shui Po, Wong Tai Sin, Kwun Tong, Kwai Tsing, Tuen Mun, Yuen Long, North, and Islands.

same period, although the absolute numbers involved were relatively small.

□ Non-engaged youth aged 15-19 and 20-24 (Indicator 7)

Both the number and share of non-engaged youth in the 20-24 age group decreased slightly in 2006. However, the number of those aged 15-19 inched up to 9 900 from 9 800, albeit with the respective share in the population remaining unchanged at 2.3%.

□ CSSA recipients with different attributes (Indicators 4, 14, 15 and 16)

The size of CSSA recipients decreased in both absolute and proportionate terms. However, within this group, the number and share of adult recipients of permanent disability/temporary disability/ill health CSSA edged higher between end-2005 and end-2006. Meanwhile, whereas the number of elderly CSSA recipients aged 60 or above showed a marginal increase from 187 700 to 187 800, their share in the respective age group fell from 17.3% to 16.7%. Furthermore, both the number and share of recipients aged 65 or above decreased. Regarding CSSA recipients aged 15-21 who were on child rate, the number decreased for the first time since 1995 (the earliest year this age-group specific figure is available), although the respective share remained broadly stable.

On the other hand, the numbers and shares of children recipients aged 0-5 and 6-14, as well as adult able-bodied recipients having been on CSSA for various durations, all went down. In particular, the number of adult able-bodied recipients having been on CSSA for more than a year decreased slightly from 118 900 to 112 600, having leaped by more than seven folds during 1995-2005. These developments attested to the importance of continued economic growth in generating more job opportunities for CSSA recipients to move away from "welfare" to "self-reliance".

6. As to the six district-based indicators, improvements had been widespread across most of the districts in 2006. In particular, 12 out of the 18 districts recorded declines in both the proportion of low-income households (Indicator 20) and the unemployment rate (Indicator 24). Among the 18 districts, 13 had improved median household income (Indicator 22), and 9 districts had improved median employment earnings (Indicator 23). The Central and Western, Wan Chai, Southern, Kowloon City, Kwun Tong, Sha Tin and Sai Kung districts were the ones with

improvements in both indicators. In aggregate, the number and proportion of low-income households, workless households (Indicator 19) and single-parent low-income households (Indicator 21) all fell in 2006. Furthermore, the overall median monthly household income and the overall median monthly employment earnings picked up to \$16,700 and \$10,500, along with the improvement in labour market conditions.

7. As for the less well-off districts, Wong Tai Sin, Kwai Tsing, Tuen Mun, Yuen Long and North districts attained improvements in four indicators. By comparison, the performance was less encouraging for Islands district, where only one indicator turned better.

Economic Analysis and Business Facilitation Unit Financial Secretary's Office 30 May 2007

Indicators of Poverty

Children/youth (aged 0-14 / 15-24)

- 1. Children aged 0-5 and 6-14 living in workless households
- 2. Children aged 0-5 and 6-14 living in households with income below average CSSA payment
- 3. Children aged 0-5 and 6-14 with single parent and in households with income below average CSSA payment
- 4. CSSA recipients aged 0-5 and 6-14, and those aged 15-21 who are on child rate
- 5. School attendance rate of youth aged 16-19
- 6. Persons aged 20-24 with tertiary education
- 7. Non-engaged youth aged 15-19 and 20-24
- 8. Children aged 0-5 and 6-14 living in private temporary housing and private shared units

Working people / adults (aged 15-59)

- 9. Persons aged 15-19 and 20-59 living in workless households
- 10. Persons aged 15-19 and 20-59 living in households with income below average CSSA payment
- 11. Unemployed persons aged 15-19, 20-24 and 25-59
- 12. Persons unemployed for 6 months or longer, and 12 months or longer
- 13. Employed persons aged 15-19, 20-24 and 25-59 working 35 hours or above per week and with monthly employment earnings less than 50% of the median
- 14. Adult able-bodied CSSA recipients having been on CSSA for 1 year or less, and longer than 1 year
- 15. Adult recipients of permanent disability/temporary disability/ill health CSSA

Older people (aged 60 or above)

- 16. Recipients of old-age CSSA
- 17. Number of elderly patients under the medical fee waiver mechanism of pubic hospitals and clinics
- 18. Elderly persons living in private temporary housing and private shared units

Community

- 19. Workless households by district
- 20. Households with income below average CSSA payment by district
- 21. Single-parent households with income below average CSSA payment by district
- 22. Median monthly household income by district
- 23. Median monthly employment earnings by district
- 24. Unemployed persons by district

Indicators of Poverty - An update for 2006 -

Background

The choice and compilation of poverty indicators which best suit the case for Hong Kong was discussed at the Commission on several occasions in 2005 (please refer to CoP Paper 3/2005, 10/2005, 26/2005 and 14/2006). Members generally agreed that instead of a single income-based indicator, a set of multi-dimensional indicators should be used for monitoring the poverty situation in Hong Kong at a macro level, supplemented by the more detailed and specific indicators at the district level. Moreover, the poverty indicators selected should not be simplistically employed as a tool for assessing the progress of the Government's poverty alleviation work, as the indicators themselves particularly those involving short-term movements, are subject to the influence of a host of factors other than Government policies and actions. The last update of poverty indicators for the year 2005 was released in CoP Paper 14/2006 and discussed at the CoP meeting on 27 September 2006.

- 2. The fundamental concept behind the multi-dimensional approach is that given the general affluence of the Hong Kong economy, it would not be appropriate to measure the size of the poor based on a single income-based indicator or a poverty line alone. We should also be concerned about the other relevant aspects of people's living, and be vigilant of the risk of certain groups of people falling into poverty. The gist of the considerations behind the choice of the poverty indicators is available in CoP Paper 26/2005.
- 3. As stated in CoP Paper 26/2005, the set of selected poverty indicators would be updated on an annual basis. The purpose of this paper is to present the figures compiled for the year 2006. The following paragraphs will give a consolidated view of the performance of the poverty indicators by segregating the life-cycle-based Indicators No. 1-18 into those which exhibited improvements and those which had different performance in 2006. The community-based Indicators No. 19-24 will be discussed separately, as the performance of the individual indicators varied among districts. The detailed statistics for the indicators are listed at the Statistical Appendix.

Indicators exhibiting improvements in 2006

Employment and earnings / income

- 4. The sustained robust economic growth had transpired into stronger labour demand and contributed to further improvement in the labour market conditions. With the net creation of 70 800 jobs for 2006 as a whole, the overall unemployment rate remained on a declining trend throughout the year, reaching a near six-year low of 4.4% at year-end. It averaged at 4.8% for 2006 as a whole, down 0.8 of a percentage point from 5.6% in 2005. Meanwhile, labour earnings in terms of payroll per person engaged rose by 2.4% in money terms, extending the uptrend established since early 2005. This favourable development extended well into the early part of this year, with the seasonally adjusted unemployment rate edging down further to 4.3% in the three months ending February and remaining static in the subsequent periods ending March and April, the lowest level in nearly nine years.
- 5. It is against this favourable economic backdrop that the indicators relating to employment and earnings/income in general continued to change for the better in 2006, as summarised below:
 - □ Unemployed persons aged 15-19, 20-24 and 25-59 (Indicator 11)
 - The number of unemployed persons aged 15-59 went down from 192 800 in 2005 to 167 800 in 2006, leading to a 0.8 percentage point fall in the unemployment rate for this particular age group to 4.8%. The improvement was most distinct among persons aged 25-29, followed by those aged 20-24.
 - □ Persons unemployed for six months or longer, and 12 months or longer (Indicator 12)
 - The problem of long-term unemployment eased distinctly further, in tandem with the sustained economic upturn. The number of persons unemployed for six months or longer dropped from 60 000 in 2005 to 44 900 in 2006. The decline was equally notable for those unemployed for 12 months or longer, from 36 100 to 26 400.
 - □ Persons aged 0-14 and 15-59 living in households with income below average CSSA payment (Indicators 2 and 10)
 - Taking these two indicators together, there were 618 600 persons aged

0-59 living in households with income below average CSSA payment in 2006, representing 11.4% of the population of this age group. They were smaller than the corresponding figures of 692 800 and 12.8% in 2005, thanks to better employment and pay conditions over the year. The improvement occurred across all age groups, namely, 0-5, 6-14, 15-19 and 20-59.

Should household income be used as the sole criterion for defining the size of the poor, the set of multi-dimensional indicators would suggest a total of 618 600 persons among those aged 0-59 in 2006. Taking into account also older persons aged 60 or above, the size of the poor would be around 822 800.

□ Persons aged 0-14 and 15-59 living in workless households (Indicators 1 and 9)

In aggregate terms, there was a total of 356 600 persons aged 0-59 living in workless households in 2006, representing 6.6% of the population of this age group, smaller than the corresponding figures of 374 300 and 6.9% in 2005. Analysed by age group, an across-the-board decrease in both the number and proportion of these people was observed over the year across all the age groups of 0-5, 6-14, 15-19 and 20-59.

Education

- 6. Expenditure on education has continued to take up the largest share of the Government's expenditure, amounting to \$53.1 billion or 22% of total public expenditure in 2006/07. This has contributed to a continuous upgrading of the education and skill levels of local workforce, thereby strengthening their capability in coping with the changing work requirements of the modern economy. Coupled with the environment of a free and fair society, education is an effective channel for upward social mobility and for avoiding entrenched and intergenerational poverty.
- 7. The education-related indicators have improved steadily over the past year:
 - □ School attendance rate of youth aged 16-19 (Indicator 5)

This indicates the proportion of youth continuing with their study after the nine-year universal free education. In 2006, the attendance rate remained

on the rise to 83.5%, from 82.8% in 2005.

□ *Persons aged 20-24 with tertiary education* (Indicator 6)

55.2% of the population of this age group attained tertiary education in 2006, up further from 52.8% in 2005. More than three-fifths of these students attained tertiary degree education in 2006.

Health

- 8. In 2006/07, the Government's expenditure on health amounted to \$32.1 billion or 13% of total public expenditure. This supports a wide range of medical and health care services for the general public at heavily subsidized rates. As to patients who need further financial support, they could apply for the medical fee waiver. Statistics show that the number of elderly people requiring additional support decreased significantly in 2006/07:
 - □ Elderly patients under the medical fee waiver mechanism of public hospitals and clinics (Indicator 17)

Despite the ageing of the population, both the number and share of elderly people under the medical fee waiver mechanism of public hospitals dropped considerably in 2006/07. Actually only a very small proportion of the elderly people used this service, at less than 1% for both the age groups of 60 or above and 65 or above.

Community / family support

- 9. The improved economic conditions in 2006 also benefited the single-parent low-income families:
 - ☐ Children aged 0-5 and 6-14 with single parent and in households with income below the average CSSA payment (Indicator 3)

The number of children aged 0-14 living in such low-income households stood at 23 100 in 2006, representing a share of 2.5% in the population of this age group. These were smaller than the corresponding figures of 24 500 and 2.6% in 2005. Yet whilst a decline was seen among the 6-14 age group, the number and share for the 0-5 age group was virtually unchanged, at 2 400 and 0.9%.

Indicators showing different performance in 2006

Employment

- 10. Whereas the overall labour market conditions improved notably further over the course of 2006, not all of the people within the labour force benefited fully from such favourable developments.
 - □ Employed persons aged 15-19, 20-24 and 25-59 working 35 hours or above per week and with monthly employment earnings less than 50% of the median (Indicator 13)

In 2006, there was an across-the-board increase in both the number and proportion of full-time workers (i.e. working 35 hours or above per week) earning less than 50% of the median employment earnings for the 15-19, 20-24, and 25-59 age groups. Taking all the groups together, the total was 213 600, representing 8.0% of all the full-time workers in the same age group. These were higher than the corresponding figures of 155 800 and 5.9% in 2005. One possible reason was the availability of more full-time low-skilled jobs, especially those in the elementary occupations category, along with the sustained pick-up in economic activity. In view of the decline in underemployment across all the age groups in 2006, some of the previously underemployed workers might have taken up full-time work with better pay and job security, even though in absolute terms their earnings were still lower than the overall median level. Also worth noting was that the median employment earnings of all employed persons actually improved to \$10,500 in 2006, from \$10,000 in 2005. Within the employed workforce, low-income workers were found mainly (more than two-fifths) among the youngest age group of 15-19, conceivably due to their lack of working experience.

Living conditions

- 11. The provision of public housing has contributed substantially to improving the living conditions of the needy, but that many elders are still suffering from poor living conditions continues to attract concerns and leads to calls for further efforts from both the Government and the community at large:
 - □ Persons aged 0-14 and 60 or over living in private temporary housing and private shared units (Indicators 8 and 18)

The total number of children aged 0-14 living in such private housing declined further from 14 700 in 2005 to 13 400 in 2006, as did their share in the population of the corresponding age group from 1.5% to 1.4%.

However, there was a mild increase in the size of the elderly living in poor housing conditions. In 2006, 24 000 elderly persons aged 60 or above lived in private temporary housing and private shared units, which was up from 23 200 in 2005. Their share in the population of the respective age group likewise rose from 2.3% to 2.4%. The same trend was observed for those elderly persons aged 65 or above. The corresponding number rose from 18 200 in 2005 to 18 700 in 2006, and the proportion from 2.3% to 2.4%.

Community / family support

- 12. Notwithstanding continuous efforts of the education sector and the other community groups, the problem of non-engaged youth has remained an area of concern requiring close monitoring:
 - □ *Non-engaged youth aged 15-19 and 20-24* (Indicator 7)
 - In 2006, there were 11 500 non-engaged youth aged 20-24, representing a share of 2.6% in the population of this age group. These figures improved somewhat from those of 11 700 and 2.7% respectively in 2005. Nevertheless, the number of non-engaged youth aged 15-19 inched up from 9 800 to 9 900 over the same period, although the respective share in the population of this age group held stable at 2.3%. Taking these two age groups together, the number of non-engaged youth showed a mild decline to 21 400 in 2006 from 21 500 in 2005, whilst the respective share remained unchanged at 2.5%.
- 13. The number of CSSA recipients could be classified as an income-related indicator, as these are the people who are genuinely in need of income support and are receiving it. In general, CSSA recipients have been on the decline in 2006. In effect, they are the group being supported by the community mainly in terms of income. Yet a decrease in their numbers and shares over the past year should not be interpreted as the community providing less income support to the disadvantaged group. Rather, it could indicate that more people have been able to move to self-reliance.

□ CSSA recipients with different attributes (Indicators 4, 14, 15 and 16)

The total number of CSSA recipients across all categories decreased from 540 000 at end-2005 to 521 600 at end-2006, with their share in the total population edging down from 7.9% to 7.6%.

But a breakdown by age group reveals that adult recipients of permanent disability/temporary disability/ill health CSSA recipients as a share in the population of the corresponding age group edged up from 1.0% at end-2005 to 1.1% at end-2006. On the other hand, the share of CSSA recipients aged 15-21 who were on child rate remained broadly stable, despite a slight drop in the absolute number. Regarding the elderly recipients, 16.7% of the population aged 60 or above and 19.0% of those aged 65 or above were on CSSA at end-2006, both down from the corresponding figures of 17.3% and 19.4% at end-2005. In absolute terms, this group of older-aged CSSA recipients however witnessed a slight increase over the period, from 187 700 to 187 800.

As for able-bodied CSSA recipients aged 15-59, the number decreased to 128 200 at end-2006 from 138 400 at end-2005. So did the respective proportion, from 2.9% to 2.6%. It is particularly worth noting that among these adult able-bodied recipients, the number of those having been on CSSA for more than one year registered a decline in 2006, after a sharp jump of 754% over the preceding ten-year period from 1995 to 2005. Conceivably, the increased job opportunities at the lower segment of the labour market, which had been created amid the recent strong and broad-based economic recovery, induced more of the CSSA recipients to rejoin the workforce.

14. On the community-related indicators, extensive improvements were observed across most of the districts. The improvement was particularly visible in respect of the unemployment rate (Indicator 24), where 16 out of the 18 districts were better off in 2006. The numbers and proportions of workless households (excluding elderly households) and single-parent low-income households also fell over the period (Indicators 19 and 21). Among the 18 districts, 13 of them had improved median household income (Indicator 22) and 9 districts had improved median employment earnings (Indicator 23). The Central and Western, Wan Chai, Southern, Kowloon City, Kwun Tong, Sha Tin and Sai Kung districts were the ones with improvements in both indicators.

- 15. For all the districts as a whole, the number of low-income households (excluding elderly households, Indicator 20) declined further from 242 300 in 2005 to 221 000 in 2006, and their share in the total number of households from 12.4% to 11.2%. Both the overall median monthly household income and overall median monthly employment earnings picked up further from \$16,000 and \$10,000 in 2005 to \$16,700 and \$10,500 in 2006 respectively along with the improvement in the labour market conditions.
- Appendix I shows the performance of the indicators in each of the districts in 2006 relative to that in 2005. While the Kwun Tong and Sha Tin districts had all the six indicators improved in 2006, Central and Western, Tai Po and Sai Kung districts attained improvements in five of them. Concurrently, 7 districts, including Eastern, Wong Tai Sin, Kwai Tsing, Tsuen Wan, Tuen Mun, Yuen Long, and North districts, saw improvements in four indicators. The performance was less remarkable for Yau Tsim Mong and Islands districts, where only one indicator improved.
- 17. Viewed from another perspective, in 2006 five districts, namely Wong Tai Sin, Kwai Tsing, Tuen Mun, Yuen Long and North districts were found to have fared less well than the overall average on all the six Indicators 19-24 (<u>Appendix II</u>), as against three districts in 2005. Nevertheless, all these five districts actually recorded improvements in four out of six indicators in 2006 as compared with 2005. The performance of Islands district also merits attention, which had four more employment/income-related indicators falling below the overall average in 2006.

Concluding remarks

- 18. It is clear from the analysis for 2006 that economic and employment growth has continued to be the most vital factor for improving the well-being of the disadvantaged and low-income group. Apart from helping these people directly with jobs and employment earnings, economic growth also provide the Government with the necessary resources for its substantial spending on education, health, welfare and other social services. Government spending serves an important function of creating a favourable and fair environment in which everyone in the society faces equal development opportunities for moving up along the social and economic ladders through their own efforts.
- 19. Among the 18 life-cycle-based poverty indicators, most of them exhibited improvements in 2006, with only the few relating to living conditions and CSSA

recipients showing a mixed performance within the sub-groups, and the one on full-time workers earning less than 50% of the median employed earnings showing subdued performance. As to the district-based indicators, all the districts attained improvements one way or the other in 2006. Among the less well-off ones, the improvements had been most distinct for Kwun Tong district.

A Comparison of the Poverty Indicators between 2005 and 2006

In the following table, the indicators which performed better in 2006 than in 2005 in the individual districts are marked by a " \checkmark ". The shaded rows represent the districts having more distinct improvements in 2006.

| Indicator | 19 | 20 | 21 | 22 | 23 | 24 |

Statistical Appendix

Indicators of Poverty

Section I Indicators for Children / Youth Aged 0-14 and 15-24

Section II Indicators for Working people / Adults Aged 15-59

Section III Indicators for Older People Aged 60 or above

Section IV Indicators for the Community

Notes

- (1) Unless otherwise stated, foreign domestic helpers are excluded from the compilation of all the indicators.
- (2) While data from the General Household Survey of the Census and Statistics Department and from the Hospital Authority are annual average figures, those on recipients of Comprehensive Social Security Assistance from the Social Welfare Department are period-end figures.
- (3) The district-based indicators under Section IV are based on the data collected from the General Household Survey for the whole year from 2001 to 2006, as well as the mid-year population estimates by District Council district as compiled by the Planning Department.
- (4) The time series of some poverty indicators enumerated from the General Household Survey has been revised to take into account enhancements in the estimation method and the results of the 2006 Population By-census, which provides a benchmark for revising the population and related figures compiled since the 2001 Population Census.

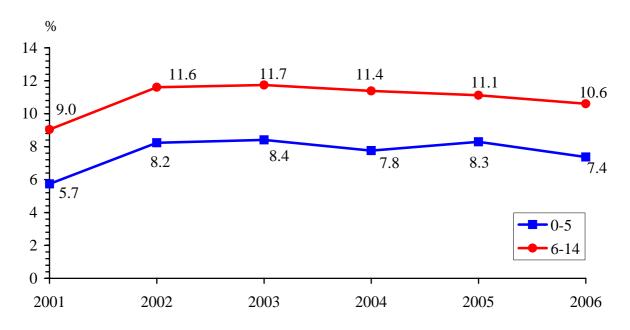

Section I: Indicators for Children / Youth Aged 0-14 and 15-24

1. Children aged 0-5 and 6-14 living in workless households

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------|-------------|-------------|-------------|-------------|-------------|-------------|
| 0-5 | 19 900 | 26 400 | 25 300 | 22 200 | 22 800 | 19 700 |
| 6-14 | 67 500 | 86 500 | 86 600 | 81 400 | 76 200 | 70 700 |

Proportion of children living in workless households by age group

2. Children aged 0-5 and 6-14 living in households with income below average CSSA payment

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------|-------------|-------------|-------------|-------------|-------------|-------------|
| 0-5 | 54 900 | 54 800 | 52 800 | 46 100 | 43 700 | 39 000 |
| 6-14 | 198 500 | 201 100 | 185 400 | 171 800 | 149 200 | 130 200 |

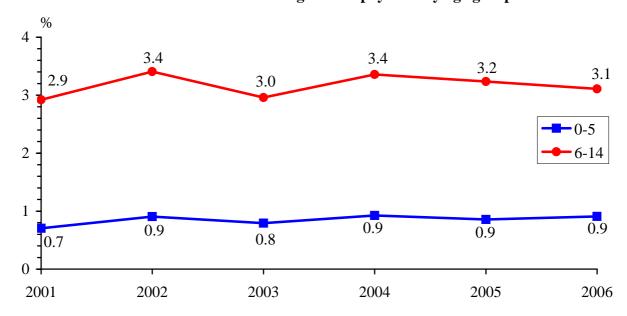

Proportion of children living in households with income below average CSSA payment by age group % 30 27.0 26.6 25.1 24.0 25 21.8 19.5 20 17.6 15 17.1 15.9 15.8 16.1 14.6 10 -0-5 5 6-14 2001 2002 2003 2004 2005 2006

3. Children aged 0-5 and 6-14 with single parent and in households with income below average CSSA payment

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------|-------------|-------------|-------------|-------------|-------------|-------------|
| 0-5 | 2 400 | 2 900 | 2 400 | 2 600 | 2 400 | 2 400 |
| 6-14 | 21 800 | 25 400 | 21 800 | 24 000 | 22 200 | 20 700 |

Proportion of children with single parent and in households with income below average CSSA payment by age group

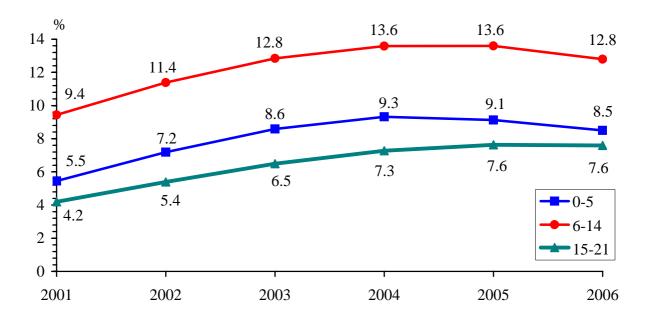

4. CSSA recipients aged 0-5 and 6-14, and those aged 15-21 who are on child rate

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|-------------|-------------|-------------|-------------|-------------|-------------|
| 0-5 | 18 200 | 22 300 | 25 300 | 26 200 | 24 900 | 23 000 |
| 6-14 | 70 800 | 84 400 | 93 600 | 95 600 | 91 800 | 85 000 |
| 15-21 | 26 300 | 33 000 | 40 200 | 45 100 | 47 300 | 46 800 |

Proportion of child rate CSSA recipients by age group

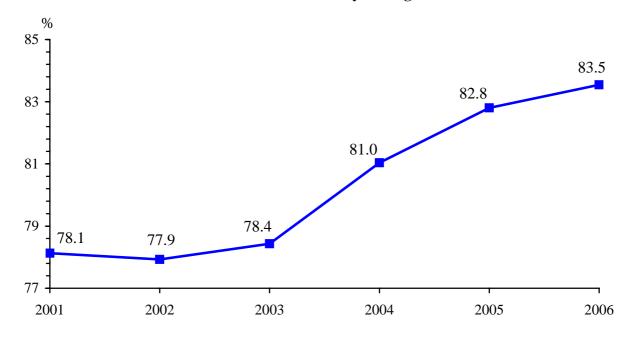

Source : Social Welfare Department.

5. School attendance rate of youth aged 16-19

Number

| <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------------|-------------|-------------|-------------|-------------|-------------|
| 280 300 | 273 100 | 266 300 | 280 000 | 286 600 | 293 900 |

School attendance rate of youth aged 16-19

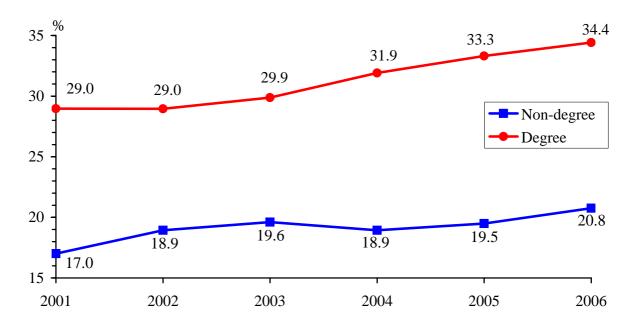

6. Persons aged 20-24 with tertiary education

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------------|-------------|-------------|-------------|-------------|-------------|-------------|
| Non-degree | 74 100 | 80 100 | 81 800 | 81 400 | 84 600 | 90 100 |
| Degree | 126 100 | 122 500 | 124 700 | 137 300 | 144 500 | 149 400 |

Proportion of persons aged 20-24 with tertiary education

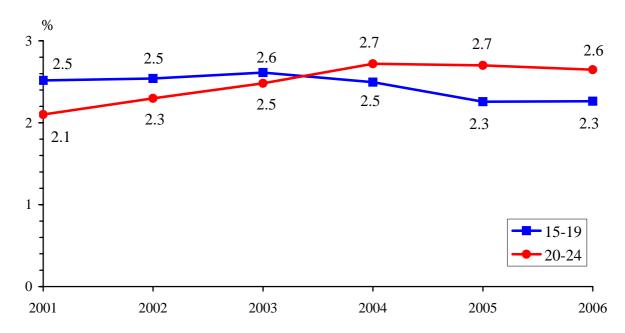

7. Non-engaged youth* aged 15-19 and 20-24

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|-------------|-------------|-------------|-------------|-------------|-------------|
| 15-19 | 11 200 | 11 000 | 11 200 | 10 800 | 9 800 | 9 900 |
| 20-24 | 9 100 | 9 700 | 10 400 | 11 700 | 11 700 | 11 500 |

Proportion of non-engaged youth by age group

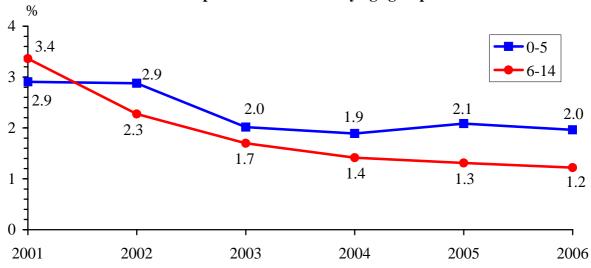

Note: (*) In this indicator, "non-engaged youth" refer to persons aged 15-24 who are economically inactive for reasons other than "students", "home-makers" and "health problems". Unemployed youth of this age group are not included. For further details about the definitions of non-engaged youth and unemployed youth, reference can be made to Footnote (1) under paragraph 6 of Annex II in CoP Paper 26/2005.

8. Children aged 0-5 and 6-14 living in private temporary housing and private shared units

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------|-------------|-------------|-------------|-------------|-------------|-------------|
| 0-5 | 10 100 | 9 200 | 6 100 | 5 400 | 5 700 | 5 200 |
| 6-14 | 25 100 | 16 900 | 12 500 | 10 100 | 9 000 | 8 100 |

Proportion of children living in private temporary housing and private shared units by age group

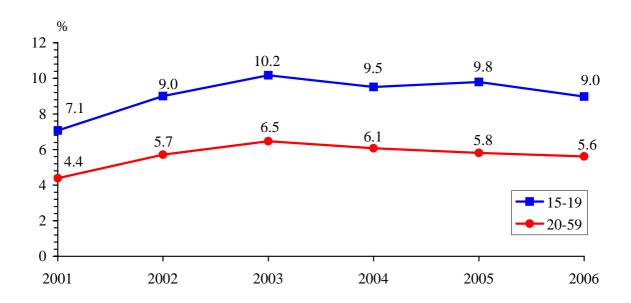

Section II: Indicators for Working People / Adults Aged 15-59

9. Persons aged 15-19 and 20-59 living in workless households

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|-------------|-------------|-------------|-------------|-------------|-------------|
| 15-19 | 30 700 | 38 500 | 42 800 | 40 100 | 41 400 | 38 200 |
| 20-59 | 171 400 | 224 200 | 254 800 | 242 300 | 233 800 | 228 000 |

Proportion of persons living in workless households by age group

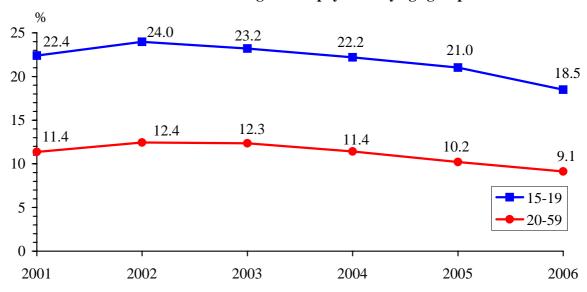

10. Persons aged 15-19 and 20-59 living in households with income below average CSSA payment

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|-------------|-------------|-------------|-------------|-------------|-------------|
| 15-19 | 97 400 | 102 400 | 97 500 | 93 500 | 88 900 | 78 700 |
| 20-59 | 443 200 | 488 800 | 486 400 | 455 700 | 411 000 | 370 800 |

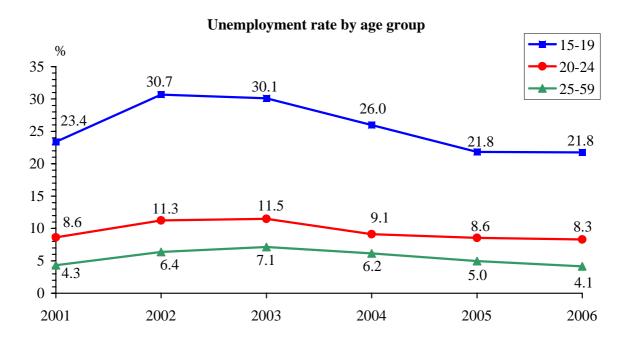

Proportion of persons living in households with income below average CSSA payment by age group

11. Unemployed persons aged 15-19, 20-24 and 25-59*

Number

| | 2001 | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|---------|-------------|-------------|-------------|-------------|-------------|
| 15-19 | 16 900 | 22 600 | 20 900 | 17 700 | 13 700 | 13 000 |
| 20-24 | 29 100 | 36 700 | 37 500 | 30 400 | 28 500 | 27 300 |
| 25-59 | 125 400 | 188 600 | 211 700 | 184 800 | 150 600 | 127 500 |

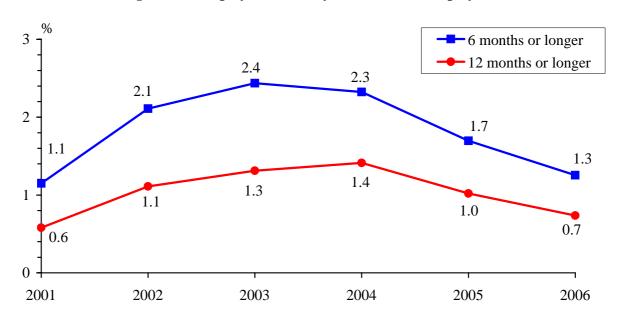

Note: (*) In order for the number of unemployed persons and the corresponding unemployment rates compiled for this indicator to be consistent with the unemployment statistics normally released, foreign domestic helpers (FDHs) have not been excluded. Yet FDHs should have insignificant effect on this indicator.

12. Persons unemployed for 6 months or longer, and 12 months or longer

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------------------|-------------|-------------|-------------|-------------|-------------|-------------|
| \geq 6 months | 39 400 | 73 300 | 84 600 | 81 700 | 60 000 | 44 900 |
| ≥ 12 months | 19 800 | 38 600 | 45 600 | 49 700 | 36 100 | 26 400 |

Long-term unemployment rate by duration of unemployment

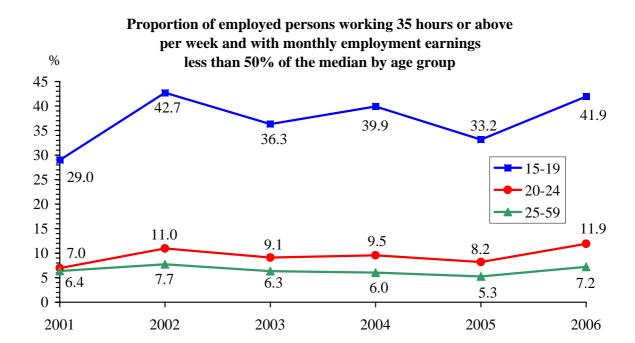

Note: (*) In order for the number of long-term unemployed persons and the corresponding long-term unemployment rates compiled for this indicator to be consistent with the unemployment statistics normally released, foreign domestic helpers (FDHs) have not been excluded. Yet FDHs should have insignificant effect on this indicator.

13. Employed persons aged 15-19, 20-24 and 25-59 working 35 hours or above per week and with monthly employment earnings less than 50% of the median

| N | um | <u>ber</u> |

| | | |

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------|-------------|-------------|-------------|-------------|-------------|-------------|
| 15-19 | 12 800 | 16 400 | 12 400 | 14 100 | 11 500 | 13 800 |
| 20-24 | 17 100 | 24 700 | 19 500 | 21 500 | 18 800 | 26 400 |
| 25-59 | 147 500 | 178 500 | 141 400 | 140 400 | 125 500 | 173 300 |

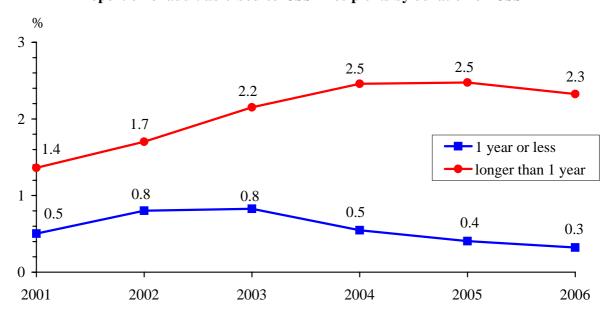

14. Adult able-bodied CSSA recipients* having been on CSSA for 1 year or less, and longer than 1 year

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|----------|-------------|-------------|-------------|-------------|-------------|-------------|
| ≤ 1 year | 23 300 | 37 300 | 38 900 | 26 000 | 19 500 | 15 600 |
| > 1 year | 63 100 | 79 200 | 101 100 | 116 700 | 118 900 | 112 600 |

Proportion of adult able-bodied CSSA recipients by duration on CSSA

Note: (*) Excluding recipients aged 15-21 who are on child rate. They have been grouped under Indicator 4 along with other child rate CSSA recipients.

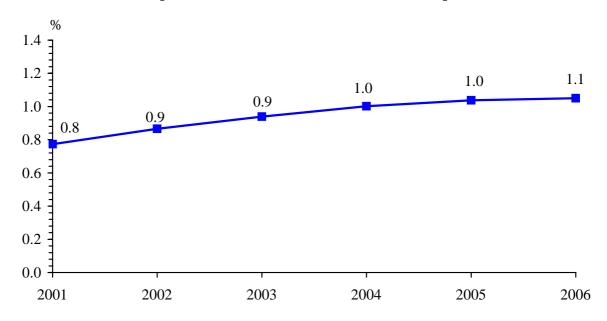

Source : Social and Welfare Department.

15. Adult recipients of permanent disability/temporary disability/ill health CSSA

Number

| <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|-------------|-------------|-------------|-------------|-------------|-------------|
| 35 900 | 40 300 | 44 100 | 47 600 | 49 800 | 50 900 |

Proportion of non-able-bodied adult CSSA recipients

Source : Social and Welfare Department.

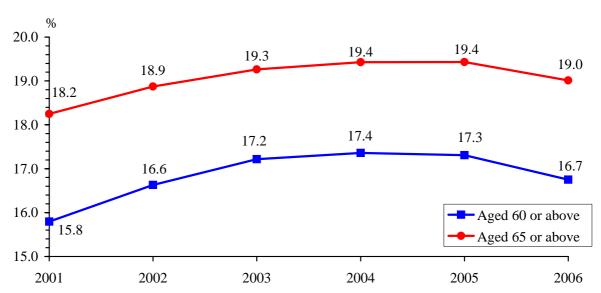

Section III: Indicators for Older People Aged 60 or Above

16. Recipients of old-age CSSA*

Number

| | <u>2001</u> | <u>2002</u> | <u>2003</u> | <u>2004</u> | <u>2005</u> | <u>2006</u> |
|------------------|-------------|-------------|-------------|-------------|-------------|-------------|
| Aged 60 or above | 160 000 | 170 500 | 179 300 | 184 800 | 187 700 | 187 800 |
| Aged 65 or above | 140 000 | 149 000 | 156 500 | 161 400 | 164 500 | 164 100 |

Proportion of old-age CSSA recipients

Note: (*) Including the elderly CSSA recipients who are on the old age able-bodied rate, 50% or 100% disabled rate, or the rate for elderly in need of constant attendance.

Source: Social and Welfare Department.

17. Elderly patients under the medical fee waiver mechanism of public hospitals and clinics

| | Year | Number of successful applicants | Share in repective age population |
|------------------|---------|---------------------------------|-----------------------------------|
| Aged 60 or above | 2004/05 | 11 189 | 1.1% |
| | 2005/06 | 10 640 | 1.0% |
| | 2006/07 | 8 026 | 0.7% |
| Aged 65 or above | 2004/05 | 9 789 | 1.2% |
| | 2005/06 | 9 238 | 1.1% |
| | 2006/07 | 6 860 | 0.8% |

Note: Data prior to April 2004 are not available.
